Dispatch from QS Dublin: Results from a QS Community Survey

Posted on February 28, 2017 by Steven Jonas

- A wide range of tools being used – from fitness trackers to phone apps to pen & paper.
- Motivations for self-tracking included fitness goals, to tackling chronic diseases to self-knowledge & curiosity.
- People found that the process of self-tracking was very useful for motivating behaviour change.
- People found that once they started tracking biometrics, they didn't stop once it became a habit.
- People are not too concerned about the confidentiality of the data.
- Overall people are happy with the tools we have.

Some charts from the survey:

Patients Use Digital Health Devices, Want Them Connected to Care

64% Patients say that they use a digital device (including mobile apps) to manage their health.

71% Patients believe it would be helpful for their doctor to have access to this information as part of their medical history.

mDAWN Participants' Comments

“I think it was a great experience...I really like the idea of people connecting with one another...I think that's a key piece and if people can connect in that way it's very supportive and this is an illness where you can really work with depression a lot and to have those other connections I think is really important.”

“[What I will take away from the program] was knowledge and the incentive just to keep going, not to let losses...pull you down, that you've got to get up and above that and even reading some of the other comments that were there, you could see the honesty and sincerity that was coming through and that has...an impact on me too.”

Patients discharged from hospital to go home: Safe monitoring by doctors and nurses, support self-care

4 year Goals

- Starts in Vancouver, spread to communities in BC
- Involve doctors, nurses, patients, government, tech companies
- Study benefits: Patient satisfaction and safety
- Test new sensors and devices over time

TEC4Home

Telehealth for Emergency-Community Continuity of Care Connectivity via Home Tele-monitoring

Heart Failure Zones

Check Weight Daily

- ▼ Weigh yourself in the morning before breakfast. Write it down. Compare your weight today to your weight yesterday.
- ▼ Keep the total amount of fluids you drink to only 6 to 8 glasses each day. (6-8 glasses equals 1500-2000 mL or 48-64 oz)
- ▼ Take your medicine exactly how your doctor said.
- ▼ Check for swelling in your feet, ankles, legs, and stomach.
- ▼ Eat foods that are low in salt or salt-free.
- ▼ Balance activity and rest periods.

Which Heart Failure Zone Are You Today? Green, Yellow, or Red

ALL CLEAR – This zone is your goal!
Your symptoms are under control.

You have:

- No shortness of breath.
- No chest discomfort, pressure, or pain.
- No swelling or increase in swelling of your feet, ankles, legs, or stomach.
- No weight gain of more than 4 lbs (2 kg) in 2 days or 5 lbs (2.5kg) in 1 week.

CAUTION – This zone is a warning

Call your Health Care provider (eg. Doctor, nurse) if you have any of the following:

- ▲ You gain more than 4 lbs (2 kg) in 2 days or 5lbs (2.5kg) in 1 week.
- ▲ You have vomiting and/or diarrhea that lasts more than two days.
- ▲ You feel more short of breath than usual.
- ▲ You have increased swelling in your feet, ankles, legs, or stomach.
- ▲ You have a dry hacking cough.
- ▲ You feel more tired and don't have the energy to do daily activities.
- ▲ You feel lightheaded or dizzy, and this is new for you.
- ▲ You feel uneasy, like something does not feel right.
- ▲ You find it harder for you to breathe when you are lying down.
- ▲ You find it easier to sleep by adding pillows or sitting up in a chair.

Health Care Provider _____ Office Phone Number _____

EMERGENCY – This zone means act fast

Go to emergency room or call 911 if you have any of the following:

- You are struggling to breathe.
- Your shortness of breath does not go away while sitting still.
- You have a fast heartbeat that does not slow down when you rest.
- You have chest pain that does not go away with rest or with medicine.
- You are having trouble thinking clearly or are feeling confused.
- You have fainted.

The information in this document is intended solely for the person to whom it was given by the healthcare team.
